

Contributing to Pharos RealFi Dashboard

Thank you for your interest in contributing! This project is open to everyone building on or around the Pharos Network ecosystem.

Code of Conduct

Be respectful. Be constructive. We're all here to build something useful for the Pharos ecosystem. Harassment or gatekeeping of any kind will not be tolerated.

How to Contribute

Reporting Bugs

1. Search [existing issues](#) to avoid duplicates
2. Use the **Bug Report** issue template
3. Include your browser, OS, and steps to reproduce

Suggesting Features

1. Open a **Feature Request** issue

2. Describe the user problem it solves
3. Reference relevant Pharos protocol documentation if applicable

Submitting Code

1. Fork the repo
 2. Create a feature branch: `git checkout -b feat/your-feature-name`
 3. Make your changes
 4. Test in at least Chrome and Firefox
 5. Submit a pull request against `main`
-

Development Setup

No build tools required. Just:

```
git clone https://github.com/YOUR_USERNAME/pharos-realfi-dashboard.git
cd pharos-realfi-dashboard
```

```
# Open in browser
open index.html
```

```
# Or use a local dev server (optional, for hot reload)
npx serve .
# or
python3 -m http.server 8080
```

All code lives in `index.html` . Sections are clearly commented:

- `<!-- HEADER -->` — brand bar and network status
 - `<!-- CHAIN STATS -->` — vitals grid
 - `<!-- MAIN GRID -->` — portfolio, dApps, tx feed
 - `<!-- BOTTOM ROW -->` — yield, RWA table, SPN, PROS
 - `<!-- TICKER BAR -->` — bottom price ticker
 - `<script>` — all live simulation logic
-

Commit Message Convention

We use [Conventional Commits](#):

```
<type>(<scope>): <short summary>
```

Types:

feat	New feature
fix	Bug fix
docs	Documentation only
style	CSS / visual changes (no logic change)
refactor	Code restructure (no behaviour change)
perf	Performance improvement
chore	Build, tooling, dependency changes

Examples:

```
feat(portfolio): add wallet address input for live balances
fix(ticker): prevent NaN on USDC price update
docs(readme): add RPC integration guide
style(cards): increase card border radius to 14px
```

Pull Request Process

1. **One concern per PR.** Keep PRs focused — don't bundle unrelated changes.
2. **Update** `CHANGELOG.md` under `[Unreleased]` for any user-facing change.
3. **Test responsiveness** — verify your changes work on mobile widths.
4. **No external dependencies** unless absolutely necessary and discussed first. The zero-dependency nature of this project is a core feature.
5. PRs are merged by maintainers after at least one review approval.

Good First Issues

These are great starting points if you're new to the project:

Issue	Difficulty	Description

Real block number	Easy	Poll Pharos RPC for live block number
Theme toggle	Easy	Add a dark/light mode switch
Address input	Medium	Let users enter wallet address to see real balances
Live TVL	Medium	Integrate Pharos subgraph for real dApp TVL
PROS price oracle	Medium	Fetch PROS/USD from PharosDEX on-chain
PWA support	Hard	Add service worker + manifest for installability

Questions?
