

Pharos RealFi Dashboard

The missing portfolio intelligence layer for the Pharos Network ecosystem.

A real-time, single-file RWA (Real World Asset) portfolio dashboard and ecosystem explorer built natively for the [Pharos Network](#) — the first EVM-compatible Layer 1 designed for institutional-grade DeFi and tokenized real-world assets.

Why This Exists

Pharos Network launched its Pacific Ocean Mainnet on **April 28, 2026**. The chain is purpose-built for tokenized Real World Assets, institutional DeFi, and high-throughput financial primitives — boasting up to **50,000 TPS, sub-second finality**, and a modular **Special Processing Network (SPN)** architecture.

Yet as the ecosystem grew, a critical gap emerged: **there was no unified dashboard** where users could:

- Track their RWA portfolio positions across multiple protocols
- Monitor live chain health and transaction throughput
- Compare yield opportunities across lending, vaulting, and staking
- Discover and assess ecosystem dApps in one place
- Understand SPN subnet status in real time

This dashboard fills that gap. It is the **RealFi control center** Pharos users needed on day one.

Features

Chain Vitals (Live)

Metric	Description
Network TPS	Real-time throughput against 50K capacity

Total Transactions	Cumulative on-chain activity
Finality	Block confirmation time (target: sub-second)
RWA TVL	Total value locked in tokenized asset protocols
Active dApps	Count of live ecosystem applications

RWA Portfolio Tracker

- **Donut allocation chart** across asset classes (Treasuries, Credit, Real Estate, Commodities)
- **Live USD portfolio value** with monthly P&L
- Per-asset breakdown with percentage weight and notional value
- Supports JTRSY, JAAA, PHRE-01, CMDX, GCL-ENRG and custom assets

Ecosystem dApp Explorer

All major Pharos mainnet protocols displayed with live TVL and 24h change:

- **PharosDEX** — Spot exchange
- **Morpho (Pharos)** — RWA lending markets
- **Bitverse Perp** — Perpetuals DEX
- **PharosOracle** — Chainlink CCIP price feeds
- **pAlpha Vault** — Institutional RWA yield vault
- **AutoStaking AI** — AI-powered yield aggregator
- **Orbiter Bridge** — ETH ↔ Pharos cross-chain bridge
- **zkDID Identity** — Primus Labs zkTLS + zkFHE compliance layer

Yield Opportunities

Ranked yield comparison across the ecosystem:

- pAlpha High Yield RWA Vault — **16.0% APY**
- AutoStaking AI Aggregator — **10.8% APY**
- Real Estate Fund LP — **8.4% APY**
- AAA Credit (JAAA) Lending — **6.2% APY**

- PROS Validator Staking — **5.0% APY**

On-Chain RWA Asset Registry

Live table of tokenized assets with yield, compliance status (zkKYC / SPN), and TVL.

SPN Network Monitor

Real-time status of all active Special Processing Networks:

- RWA Settlement SPN
- AI Inference SPN (ZKML + TEE)
- HFT Trading SPN
- DePIN Infrastructure SPN

\$PROS Token Tracker

- Live price feed with TGE delta
- Staking lock percentage
- Roadmap milestone tracker

Live Transaction Feed

Streaming simulation of on-chain activity: swaps, RWA deposits, borrows, bridges, yield claims, and perpetual trades — updating every 1.1 seconds.

Price Ticker Bar

Persistent bottom ticker with live-updating prices for PROS, JTRSY, JAAA, ETH, BTC, PHRE-01, CMDX, and USDC.

Quick Start

No build tools. No dependencies. No Node.js. One file.

```
# Clone the repo
git clone https://github.com/YOUR_USERNAME/pharos-realfi-dashboard.git

# Open directly in your browser
open index.html
```

Or visit the live deployment: https://YOUR_USERNAME.github.io/pharos-realfi-dashboard

Repository Structure

```
pharos-realfi-dashboard/

```

Connecting to Real Pharos RPC

The dashboard currently runs on simulated live data. To connect to the real Pharos Network:

Mainnet RPC Endpoints:

```
https://mainnet.pharosnetwork.xyz/rpc
wss://mainnet.pharosnetwork.xyz/ws
```

Chain ID: 1130 (verify on official docs)

To wire up real data, replace the JS simulation blocks in `index.html` with `ethers.js` or `viem` calls:

```
import { createPublicClient, http } from 'viem'

const client = createPublicClient({
  transport: http('https://mainnet.pharosnetwork.xyz/rpc')
})

// Fetch real block number
const block = await client.getBlockNumber()
```

Roadmap

- v1.0 — Core dashboard with simulated live data
 - v1.1 — Real RPC integration (block number, TPS, finality)
 - v1.2 — Wallet connect (MetaMask / WalletConnect)
 - v1.3 — Real portfolio balances via address input
 - v1.4 — Live dApp TVL from Pharos subgraph
 - v1.5 — PROS price from PharosDEX on-chain oracle
 - v2.0 — Multi-wallet portfolio aggregation
 - v2.1 — Alerts & notifications for yield changes
 - v2.2 — Mobile-native PWA wrapper
-

Contributing

Contributions are welcome! See [CONTRIBUTING.md](#) for guidelines.

Good first issues:

- Replace simulated TPS with real RPC polling
 - Add wallet address input for real portfolio balances
 - Integrate Pharos subgraph for live TVL data
 - Add dark/light theme toggle
-

License
